Food Restaurant

Food Restaurant is an exotic restaurant that deals in various cuisines such as Indian food, Italian food and Korean food. It was created with React.js, Redux, Html and CSS for ordering food online. The website includes features such as user authentication, a home page with a menu, category pages, detailed food pages, a user profile, and a shopping cart.

Features

User Authentication: Users can register and log in with validation. User data is stored in local storage for simplicity in this mini project.

Home Page: The home page includes a top menu, an image slider for ads, and categories of food.

Category Page: Each category has its own page with a list of foods related to that category.

Single Food Page: Clicking on a food item in a category navigates the user to a detailed page about that specific food.

Profile Page: Users have a profile page where they can view and edit their personal information.

Cart Page: The cart page is implemented with Redux, allowing users to perform the following actions:

Add items to the cart;

- Delete items from the cart

- Clear the entire cart

- Adjust item quantities with a responsive total.

Technologies Used

React.js

Redux
